

Testing of the claimed attributes

Goal:

Additional claims of product attributes can offer a competitive advantage. Waterproofness, surface finishing or water repellence increase the value of your product and testify to the competence of your company.

The tests are particularly suited for:

- All types of clothing
- Home textiles and bedding
- Sanfor®-finishings
- Teflon®-coated textiles

Description:

It is possible to test the behaviour of textiles with the following attributes:

For example

- Water repellence
- Water proofness
- Air permeability
- Surface finishing, i.e. flouorocarbon
- Oil repellence

Your benefits as orderer:

- Securing of the product quality
- Continous assessment of the product quality
- Comparing supplier evaluation
- Competitive advantage on the market

Requirements for the test samples

General:

Test samples in new condition
Attribute descriptions and specifications of the material

Size/quantity of test sample:

At least 2 test samples or 1,0 m² material

Test duration

10 work days
